

IBOTA Foundation

IBOTA is an acronym for 'International Bridge of Technical Assistance' and is a non-profit foundation, serving as a bridge between the affluent Western technological world and developing nations.

IBOTA selects, manages and funds technical projects in developing countries, contributing directly to the improvement of the welfare of the underprivileged. IBOTA is involved in training young people, transferring practical skills and aiding them to set up their own business. It aims to help them to become aware of their own potential and to offer hope for the future.

WATER, SOURCE OF LIFE

In a large part of the world people do not have access to clean drinking water. Because of these problems diarrhoea, which ultimately results in dehydration, has been the number one cause of death in developing countries.

A SOLUTION WITHIN REACH

The AQUA Logic CS-Mobile. This handy device is especially developed for household and personal purposes in underdeveloped and emergency situations. It can be used for aid and relief work, and when natural disasters occur. With this filter, polluted and contaminated surface water can be easily purified from chemical, organic and bacteriological pollutants.

CHARACTERISTICS OF THE FILTER

De AQUA Logic CS-Mobile is a water filter that consists of a sintered, activated carbon block, impregnated with silver. The carbon filter absorbs bad taste, odour and colour as well as chloride and other chemicals. Apart from that, bacteria, yeast and other micro-organisms are intercepted and made harmless by the present silver molecules.

KEY FEATURES OF THE AQUA LOGIC CS-MOBILE

- The filter purifies water without using chemicals.
- Important natural salts and minerals are retained.
- It is hand operated, and therefore usable anywhere, at anytime, by anybody.
- The filter is compact, reliable and sturdy, as well as relatively cheap.
- The device needs little maintenance and only high quality non - corrosive parts are used.
- The filter has a build in cleaning system.

INNOLOGIC

The AQUA Logic water filters are developed and produced under supervision of Innologic bv, a technical research company, as commissioned from the IBOTA Foundation.
